Customer Problem Statement Template:

Passengers often face challenges while booking metro tickets and managing smart card services through traditional or manual methods. They experience long waiting times at ticket counters, difficulty in recharging smart cards, lack of real-time ticket availability, and limited visibility into booking details. Manual ticketing processes increase waiting time, reduce operational efficiency, and make it difficult for passengers to access quick and convenient metro services.

The **Metro Ticket Booking System in ServiceNow** aims to address these challenges by providing a centralized and automated platform for booking metro tickets, recharging smart cards, generating QR code-based e-tickets, calculating fares automatically, and maintaining passenger travel records. By understanding the needs and expectations of passengers and metro administrators, the system focuses on reducing booking time, improving service accessibility, enhancing transparency, automating workflow processes, and delivering a seamless digital ticketing experience. This enables metro authorities to manage ticketing operations efficiently while ensuring faster service delivery, secure transactions, and greater passenger satisfaction.

 I am	Describe customer with 3-4 key characteristics – who are they? I am a working professional who travels daily by metro. I need quick and reliable ticket booking and smart card services. I prefer digital solutions that save time and make my commute smooth.	
 I'm trying to	List their outcome or "job" the care about – what are they trying to achieve? I want to book metro tickets, recharge my smart card, check fare details, and view my booking history easily. I want to get my ticket instantly (QR or smart card) and receive confirmations without any hassle.	
 but	Describe what problems or barriers stand in the way – what bothers them most? The current process is slow and involves long queues at counters. Ticket availability, fare details, or recharge status are not always accurate. Tracking bookings and getting support when needed is difficult.	
 because	Enter the "root cause" of why the problem or barrier exists – what needs to be solved? Because the system is manual, not integrated, and lacks real-time updates. Ticket booking, fare calculation, and smart card recharge are handled separately with no central platform. There is no easy way to access information or manage transactions efficiently.	
 which makes me feel	Describe the emotions from the customer's point of view – how does it impact them emotionally? This makes me feel frustrated, stressed, and inconvenienced. I waste time in queues and face uncertainty about my bookings and payments. I feel the service is not reliable and does not provide a seamless travel experience.	
 Customer Need (Key Insight) A fast, reliable, and user-friendly metro ticket booking system with real-time updates, easy payment options, smart card services, and excellent support for a seamless travel experience.

Example:

I am	I'm trying to	But	Because	Which makes me feel
A passenger or metro commuter who needs to book metro tickets or recharge a smart card for daily travel.s	Book metro tickets quickly, recharge my smart card easily, and receive a QR code for hassle-free travel.	The ticket booking process is time-consuming, requires waiting in queues, and makes it difficult to track ticket details or recharge status.	The traditional ticketing process is manual, ticket booking and recharge services are not centralized, and there is limited visibility into booking and payment status.	Frustrated, inconvenienced, and dissatisfied because ticket booking takes longer and the travel experience is less efficient.
