Date	29 June 2026
NAME	HARRI VENDHAN L
Project Name	Metro ticket generating system in ServiceNow
Maximum Marks	2 Marks

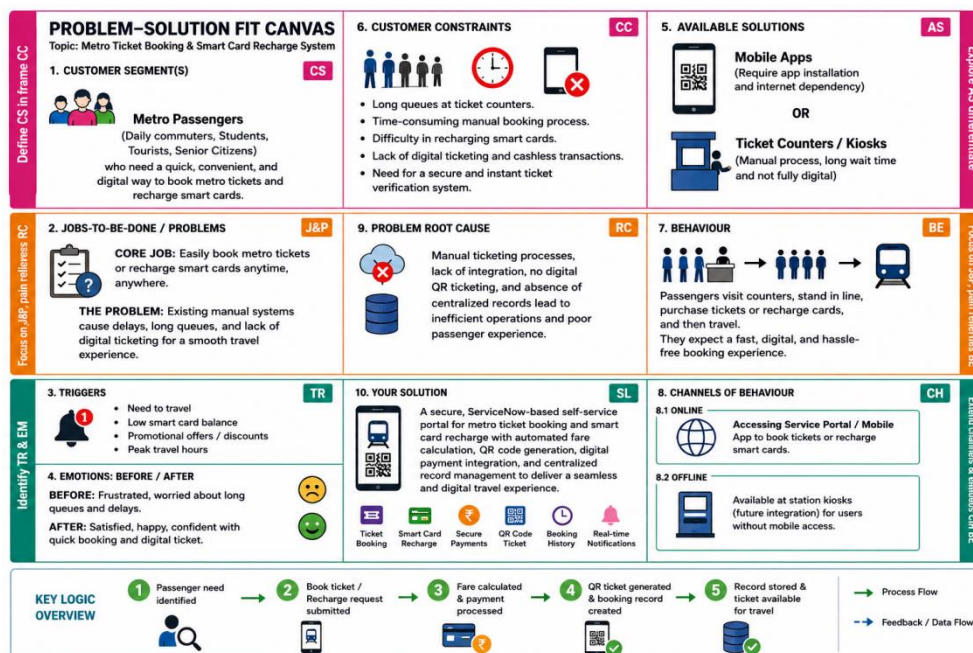

Problem – Solution Fit Template

The **Problem–Solution Fit** for the **Metro Ticket Booking and Smart Card Recharge System** demonstrates a strong alignment between the challenges faced by metro passengers in purchasing tickets and recharging smart cards and the automated ServiceNow-based solution developed to address them. The system simplifies the ticket booking process, automates request handling, generates QR code tickets, and improves the overall passenger experience.

Purpose:

- **Fits the User's Context:** Enables passengers to book metro tickets or recharge smart cards anytime through a simple self-service portal without visiting ticket counters.
- **Leverages Familiar Behavior:** Uses an intuitive Service Catalog form with easy-to-understand fields, making the booking and recharge process quick and user-friendly.
- **Provides Clear Status Updates:** Automatically processes requests through Flow Designer, stores booking details in the Metro Database, and generates a unique QR Code for ticket verification.
- **Eliminates Common Problems:** Reduces waiting time, avoids manual ticket issuance, minimizes data entry errors, and provides a secure digital ticket for passengers.
- **Optimizes Metro Operations:** Centralizes passenger booking records, automates workflow processing, supports QR-based ticket validation, and improves the efficiency of metro ticket management within the ServiceNow platform.
